For immediate release

Geometric to launch CAMWorks® 2009 at WESTEC®

Scottsdale, Arizona, March 19, 2009: Geometric Technologies, Inc., a subsidiary of [Geometric Limited](#) and an industry leader in developing advanced manufacturing software will showcase [CAMWorks®](#) 2009, the latest version of its solid-based CNC programming solution, at Booth # 3363 at the WESTEC 2009 exposition, to be held in Los Angeles, Calif. from March 30 to April 2, 2009.

This release has over 100 user-driven features and enhancements, to enable users to program parts faster and more easily. In addition, it provides a significant number of new machining options to further strengthen CAMWorks' existing manufacturing capabilities.

"In today's manufacturing landscape, the most successful shops are constantly evaluating their methodology and technology to stay competitive. We continually improve CAMWorks to meet the increasing needs of the mold making and machining industries.", said Bruce Wiener, Director - Research & Development, at Geometric Technologies, "In addition to the user-driven enhancements and features, CAMWorks 2009 is available in a 64-bit version that allows engineers to use its powerful processing to program data-intensive parts."

Some of the key enhancements of CAMWorks 2009 that would be showcased at the event include:

- **Multiple process support:** Increase in performance due to CAMWorks' ability to generate 3 - 5 axis toolpaths as separate threads, and in separate processes allowing users to continue working in other areas, or on other CAM models.
- **CAM data reusability:** Data reusability has been extended to enable the import of CAM data associated with part models into assembly models, allowing parts to be programmed and applied to different jobs. In addition, library features can be created where only select CAM data can be reused in other jobs.
- **Visualization:** Improved graphic display performance, expansion in part and machine simulation, and a new XML-based user defined setup sheet, which allows machining information to be viewed in a web browser
- **Additional Enhancements:** Turning features and toolpaths have been made more intelligent, thus resulting in safer and more simplified programming of turn and mill/turn parts. Wire EDM users will benefit from new and easy creation of multiple glue stops and a more powerful post processing environment. Simultaneous 4/5 axis improvements include enhanced toolpath control, expanded collision avoidance and creation of multiple toolpaths using rotate and copy options. Lastly, enhancement to Automatic Feature Recognition and the intuitive user interface make CAMWorks easier to use than before.

CAMWorks is a SolidWorks® certified Gold CAM product that provides state-of-the-art machining capabilities seamlessly integrated in SolidWorks. CAMWorks can run within SolidWorks, or as part of a cost-effective CAD/CAM package that includes CAMWorks Solids, an integrated solid modeler.

About Geometric

Geometric is a specialist in the domain of engineering solutions, services and technologies. Its portfolio of Global Engineering services and Digital Technology solutions for Product Lifecycle Management (PLM) enables companies to formulate, implement, and execute global engineering and manufacturing strategies aimed at achieving greater efficiencies in the product realization lifecycle.

Headquartered in Mumbai, India, Geometric was incorporated in 1994 and is listed on the Bombay and National Stock Exchanges. The company recorded consolidated revenues of Rupees 4.86 billion (US Dollars 121.6 million) for the year ended March 2008. It employs close to 3000 people across 10 global delivery locations in the US, France, Romania, India, and China. Geometric is assessed at SEI CMMI Level 5 for its software services and ISO 9001:2000 certified for engineering operations.

Geometric's Desktop Products and Technologies (DPT) business unit develops cutting-edge point productivity solutions that enhance design and improve manufacturing operations. The end-user products from Geometric include CAMWorks®, eDrawings® Publisher, DFMPRO, GeomCaliper®, and 3DPaintBrush™. The key technologies from Geometric are NestLib®, Feature Recognition (FR), GeomDiff and 3DSearchIT®. Geometric licenses these technologies to OEM partners and also designs and implements customized process solutions using these technologies for industrial customers.
